

Dear customer,

As of January 1st 2015 Staalwerk has appointed me as the new General Manager. Staalwerk shows a very healthy growth. This requires a new focus on our organization & market. Please, read my interview below and let's look ahead and see how we can offer you our products & services in 2015.

*With kind regards,
Koen Verstegen, General Manager*

New General Manager for Staalwerk

In the some twelve years that Koen Verstegen (36) has been working at Staalwerk, he has witnessed the firm's vigorous growth. Staalwerk has expanded from 'the local steel company' into an expert in turnkey solutions for international firms, with a current workforce of over eighty. While Koen Verstegen originally joined Staalwerk as a planner/engineer, today – twelve years down the line – the firm's Managing Director/ proprietor, Jan de Wringer, presented him as the new General Manager. Koen: "We have pretty ambitious plans for the further growth of Staalwerk during the next few years."

ISO 9001 certification obtained!

Staalwerk is proud to announce that the company has demonstrated its quality management system is now compliant with the requirements of the ISO 9001: 2008. The certification was awarded by Bureau Veritas. Staalwerk began the rigorous process over a year ago to implement all the necessary documentation and systematic changes to meet all mandatory criteria to receive certification.

The ISO 9001: 2008 registration will show to our customers and business partners that we are committed to providing a robust quality management system that controls its designing, manufacturing and installation. These elements will be essential in the company's ability to offer the highest quality products and services to its customers.

New pipe bending system with mandrel

Staalwerk is strong in manufacturing skids & piping. For facilitating the production, we bought a new pipe bending system with mandrel. This system can easily handle pipe diameters up to 90 mm and lengths up to 5.800 mm. But more important, what are the advantages for your business?

- Increased hygienic level as the amount of weldings is greatly reduced.
- High flexibility as every bending angle is feasible.
- Sloped piping is easily achieved.
